

HTML SelectNodes

SelectNodes Method

Selects a list of nodes matching the `HtmlAgilityPack.HtmlNode.XPath` expression.

Parameters:

`xpath`: The XPath expression.

Returns:

An `HtmlAgilityPack.HtmlNodeCollection` containing a collection of nodes matching the `HtmlAgilityPack.HtmlNode.XPath` query, or null if no node matched the XPath expression.

Examples

The following example selects the first node matching the XPath expression using `SelectNodes` method.

```
var htmlDoc = new HtmlDocument();
htmlDoc.LoadHtml(html);

string name = htmlDoc.DocumentNode
    .SelectNodes("//td/input")
    .First()
    .Attributes["value"].Value;
```

```
var htmlDoc = new HtmlDocument();  
htmlDoc.LoadHtml(html);  
  
var htmlNodes = htmlDoc.DocumentNode.SelectNodes("//td/input");
```
