

# HTML SelectSingleNode

## SelectSingleNode Method

---

Selects first HtmlNode matching the HtmlAgilityPack.HtmlNode.XPath expression.

### Parameters:

xpath: The XPath expression. May not be null.

### Returns:

matching node was found.

## Examples

The following example selects the first node matching the XPath expression using SelectNodes method.

```
var htmlDoc = new HtmlDocument();  
htmlDoc.LoadHtml(html);  
  
string name = htmlDoc.DocumentNode  
    .SelectSingleNode("//td/input")  
    .Attributes["value"].Value;
```
